GIAN KARL L. COLINARES

Taguig City, Philippines | gkcolinares@gmail.com | +63 956 253 5772 | linkedin.com/in/gkcolinares| github.com/Gkcoli

WORK EXPERIENCE

Machine Learning & Android Developer Intern Mar 2026 - May 2026

DOST-ITDI (Industrial Technology Development Institute), Taguig City

- Developed an Android application for LGUs and households supporting waste classification and segregation, translating a research prototype into a working mobile tool.
- Integrated a MobileNetV2 image-classification model for automated waste classification, handling on-device inference and model integration in Android Studio.
- Prepared, cleaned, and augmented image datasets for model training and validation.
- Technologies: Android Development, Kotlin, Android Studio, MobileNetV2, TensorFlow Lite

PROJECTS

F1 Grand Prix Winner Prediction Mar 2026

Data Scientist | Personal Project

- Built a machine learning pipeline evaluated across 70+ years of Formula 1 data; the top-performing Random Forest model achieved 92% accuracy and a 0.946 ROC-AUC in predicting Grand Prix winners.
- Engineered rolling driver and constructor form features, demonstrating via feature-importance analysis that qualifying and grid positions carry over 59% of the predictive weight.
- Developed a secondary classification model forecasting season-long World Drivers' Championships with 96% accuracy and a 1.00 ROC-AUC.

ArtDecode: Multi-Class Art Style Classification with CNNs Feb 2025 - Mar 2025

Machine Learning Engineer | Academic Project

- Developed a VGG-13 Convolutional Neural Network for art style classification using the WikiArt dataset.
- Achieved 63.08% classification accuracy across multiple art styles through hyperparameter tuning and dataset preprocessing.

Meteorologically Aware AI for Heat-Index Forecasting in the Philippines Jul 2025 - Feb 2026

Data Engineer | Academic Project

- Collected and structured heat-index datasets by scraping PAGASA benchmarks, LGU social media pages, and X (Twitter) sources, building a clean, model-ready dataset for training and analysis.
- Designed the data cleaning and validation workflow supporting forecasting model development across a multi-month research timeline.

Data-Driven Analysis of Daily Stress Levels and Stress-Relief Activities Nov 2025 - Feb 2026

Data Scientist | Academic Project

- Analyzed smartwatch-generated biometric data to identify patterns and correlations between stress levels and daily activities.
- Generated visual insights through time-series analysis that identified effective stress-relief activities and peak stress periods.

IMDb Top 250 Movies: Statistical Analysis and Trend Forecasting May 2026

Data Scientist | Personal Project

- Conducted a One-Way ANOVA ($p = 0.596$) to evaluate whether IMDb scores differed significantly across primary movie genres.
- Implemented a 5-year rolling-mean forecasting workflow to track rating shifts across decades and project top-tier movie score trajectories through 2030.

EDUCATION

Bachelor of Science in Computer Science, Major in Machine Learning Aug 2022 - Sep 2026

National University - Manila

- Graduated Cum Laude (CGWA: 3.44)
- Relevant Coursework: Deep Learning, Reinforcement Learning, Machine Learning, Data Science, Software Engineering, Object-Oriented Programming, Databases

SKILLS

Programming Languages: Python, Java, Kotlin, JavaScript

Libraries & Frameworks: pandas, NumPy, scikit-learn, TensorFlow, Keras, Matplotlib, Seaborn, SciPy

Machine Learning: Deep Learning, Convolutional Neural Networks (CNN), Random Forest, Classification, Feature Engineering, Model Evaluation, Hyperparameter Tuning

Data & Analytics: Data Analysis, Statistical Analysis, Data Visualization, Time-Series Analysis, Data Cleaning, Web Scraping, EDA

Tools & Databases: Jupyter Notebook, Git, GitHub, Android Studio, SQL, NoSQL, Microsoft Office, Google Workspace
